Java

1. How JAVA works?
Java is compiled into the bytecode and then it
is interpreted to machine code.

2.
```
package com. company    // Group classes
public class main {     // Entry point into the appl.

        public static void main (string [] args) {
        System. out. println ( "Hello World");
        }
}
```

• Naming Conventions

(i) for classes we use Pascal convention the
first and subsequent characters from a word
are capital letters. i: my Scanner.

(ii) for functions & variables we use camelCase
convention. camelCase convention

17   Again

1.   Basic   structure   of a java   Program

→   functions   :-

•   classes   :-   Group   similar   functions

2.   Java   is   an   object   oriented   programm
language   developed   by   Sun   Microsystems.
